Personal Projects

Kanji Sorter Web App

denimintsaev.com/kanjisorter

Sorts and filters Chinese or Japanese characters from an input in various ways. Allows saving personal kanji list in the cloud. Aids in the process of learning the Chinese and Japanese writing systems.

Statistics Tracker Phone App

github.com/dmint789/stat-tracker

Mobile app made in React Native with Typescript used for tracking and sorting various daily statistics, like things related to hobbies, work, health, etc.

About Me

After over 10 years of programming, I have gained experience in many different IT fields ranging from system administration to mobile app development and even game development. My specialty is web development, where I have experience in creating full-stack websites and deploying them to Linux servers. It also helps that I use Linux myself and know a great deal about how to utilize the OS effectively. I also have experience with working in a team of developers, good leadership and communication skills, and the ability to learn new technologies at a rapid pace. I aim to work in a company with great potential, while continuing to improve my skills in web development and IT in general.
