Manchester, UK

Work Experience

Web-Most | *eljur.ru*

Front-end developer (full-time)

October 2022 - present

• Rebuilding old pages using Vue and Less, adding new UI elements and features, and cleaning up legacy code for a website used for monitoring school attendance, grades, etc.

World Cube Association | *worldcubeassociation.org*

Full-stack developer (volunteer)

June 2021 - present

• Adding new features, porting old front-end code to React and fixing bugs using a tech stack with Ruby on Rails, React and MySQL, while working with a global team of developers.

Personal Projects

Kanji Sorter Web App

denimintsaev.com/kanjisorter

Sorts and filters Chinese or Japanese characters from the input in various ways. Aids in the process of learning the Chinese and Japanese writing systems.

Statistics Tracker Phone App

github.com/dmint789/stat-tracker

Mobile app made in React Native used for tracking and sorting various daily statistics, like things related to hobbies, work, health, etc.

About Me

After over 10 years of programming, I have gained experience in many different IT fields, from system administration to mobile app development and even game development. My specialty is web development, where I have experience in creating full-stack websites and deploying them to Linux servers. It also helps that I use Linux myself and know a great deal about how to utilize the OS effectively. I also have experience with working in a team of developers, good leadership and communication skills, and the ability to learn new technologies at a rapid pace. I aim to work in a company with great potential, while continuing to improve my skills in web development and IT in general.
